ERP Case Study – KL University ERP

Subject: Adaptive Software Engineering

Case Study

Selected System: KL University ERP System

The KL University ERP (Enterprise Resource Planning) System is an online portal used by students, faculty, and administrators to manage academic and administrative activities. It provides all important services in one place, making the work easier and faster.

---

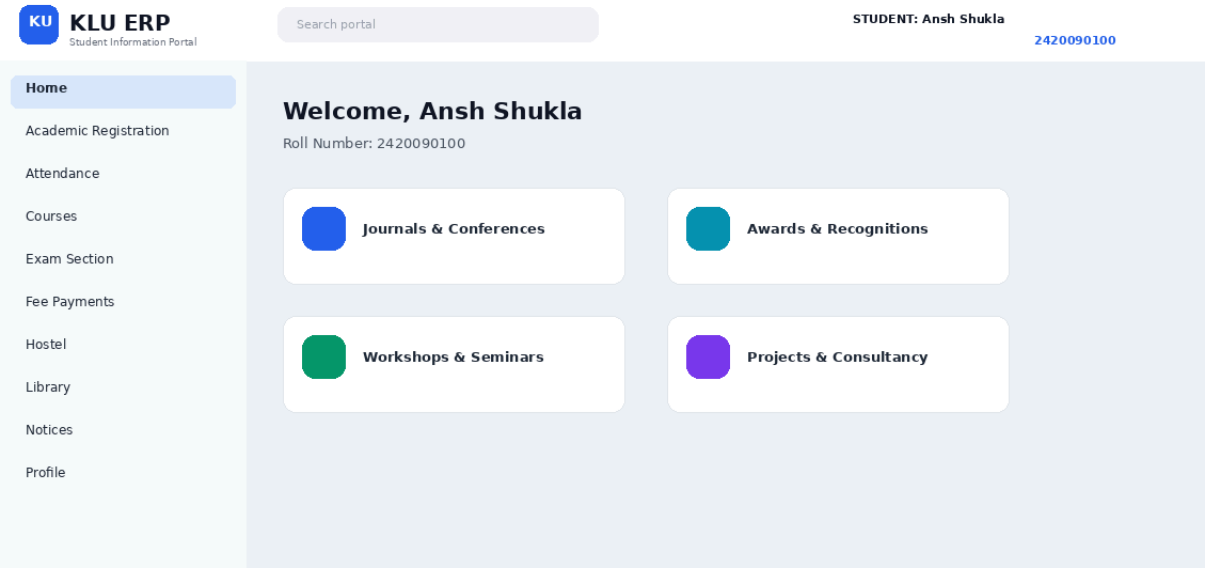

1. Understanding the System

The KL University ERP System helps manage different university activities such as:

- Student Login
- Attendance Management
- Course Registration
- Timetable
- Examination Results
- Fee Payment
- Assignment Submission

- Notifications
- Student Profile Management

It reduces paperwork and allows users to access information anytime.

---

2. User Stories

Student

- As a student, I want to log in securely to access my academic details.
- As a student, I want to view my attendance.
- As a student, I want to check my examination results.
- As a student, I want to view my timetable.
- As a student, I want to pay my fees online.
- As a student, I want to update my profile information.

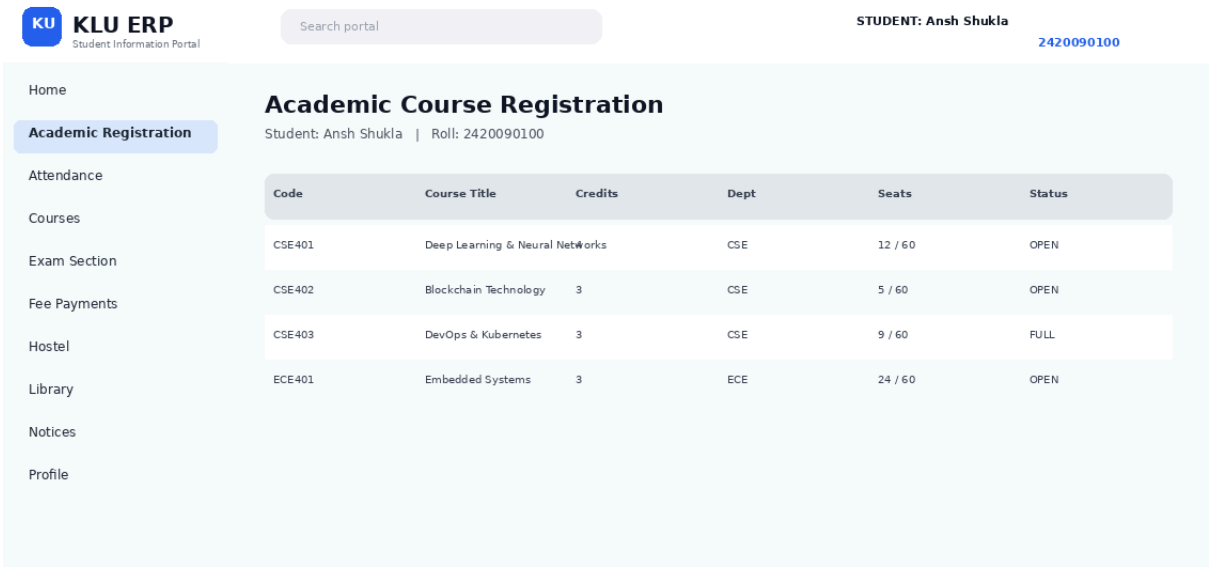

Faculty

- As a faculty member, I want to upload attendance.
- As a faculty member, I want to upload student marks.
- As a faculty member, I want to manage course information.
- As a faculty member, I want to view student performance.

Admin

- As an admin, I want to manage student records.
- As an admin, I want to manage faculty details.
- As an admin, I want to manage courses and departments.

- As an admin, I want to generate university reports.

---

3. Software Development Process Model

Selected Model: Agile Model

Reason:

- Easy to add new features.
- Changes can be made quickly.
- Regular testing improves the software.
- User feedback can be added in every update.
- Suitable for ERP systems because requirements may change over time.

---

4. Programming Language

Frontend

- HTML
- CSS
- JavaScript
- React

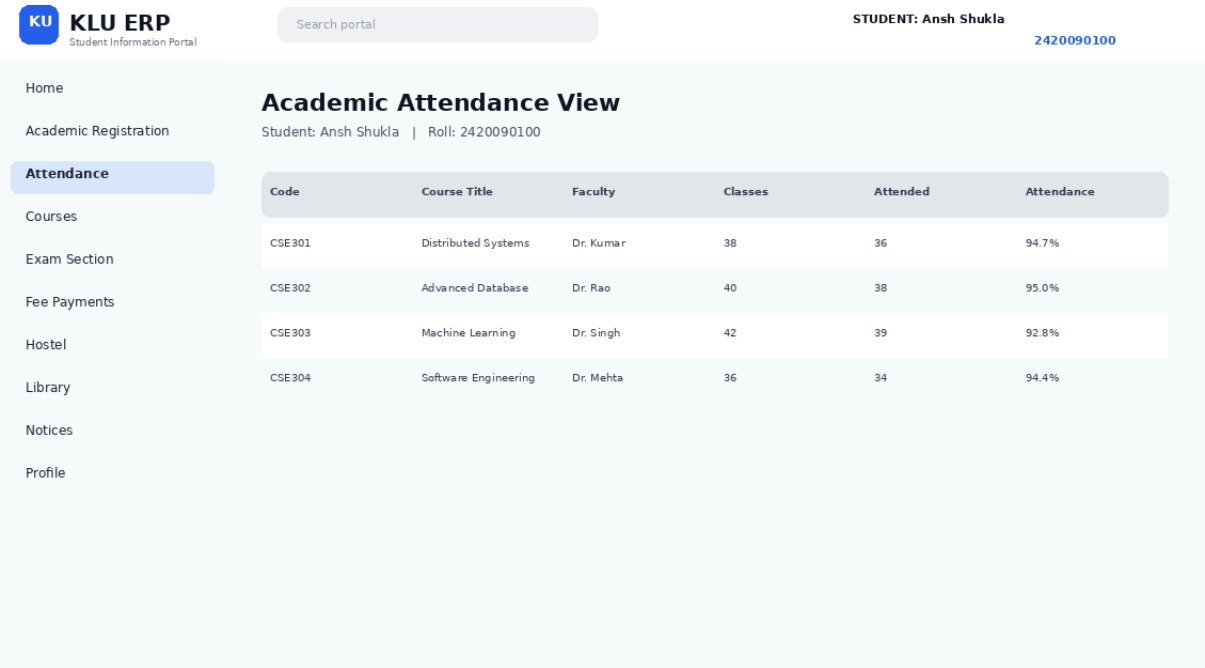

Backend

- Java (Spring Boot)

Database

- MySQL

These technologies help build a secure, fast, and user-friendly ERP system.

---

5. Implementation Strategy

1. Gather requirements from students, faculty, and administrators.
2. Design the database and user interface.
3. Develop modules such as Login, Attendance, Results, Timetable, and Fee Payment.
4. Connect the frontend with the backend.
5. Test every module.
6. Deploy the application.
7. Improve the system based on user feedback.

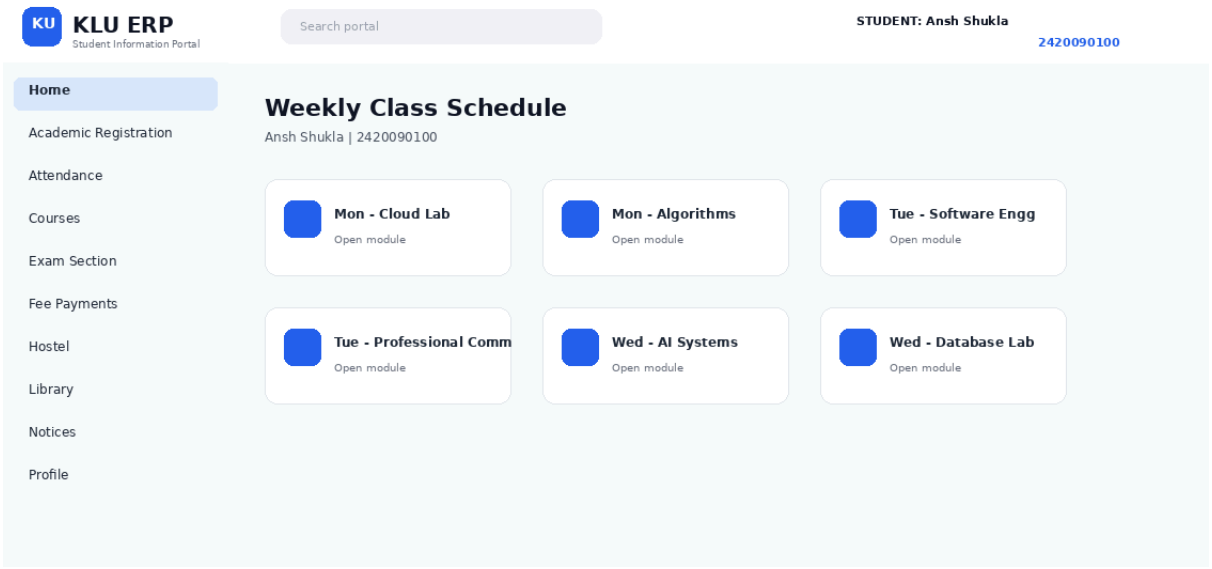

---

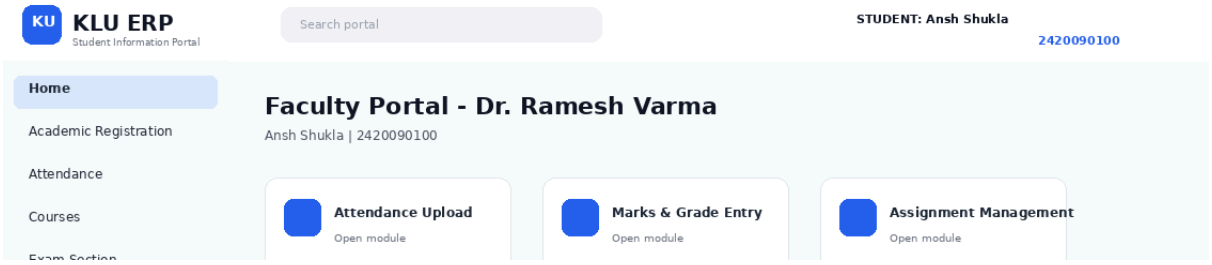

6. Evaluation Strategy

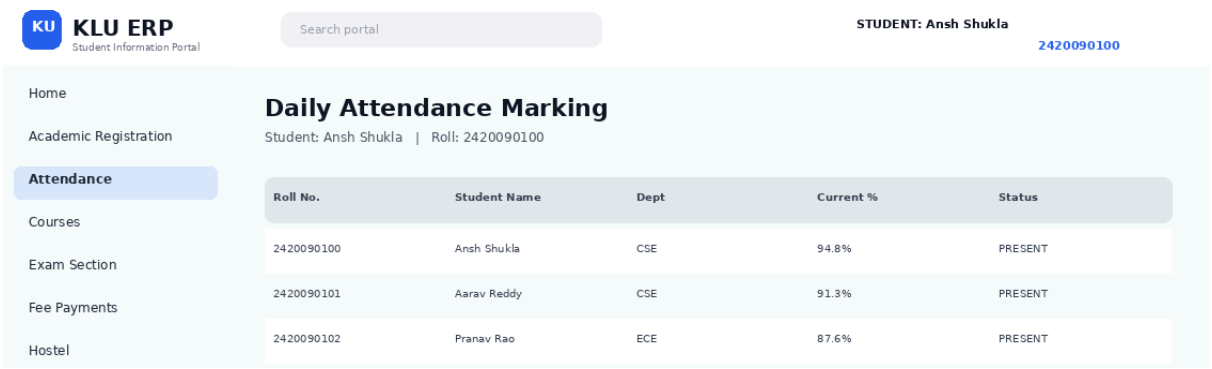

The ERP system will be evaluated by checking:

- Login works correctly.
- Attendance information is accurate.
- Results are displayed correctly.
- Fee payment works properly.
- The website loads quickly.
- User information is secure.

- The system is easy to use.

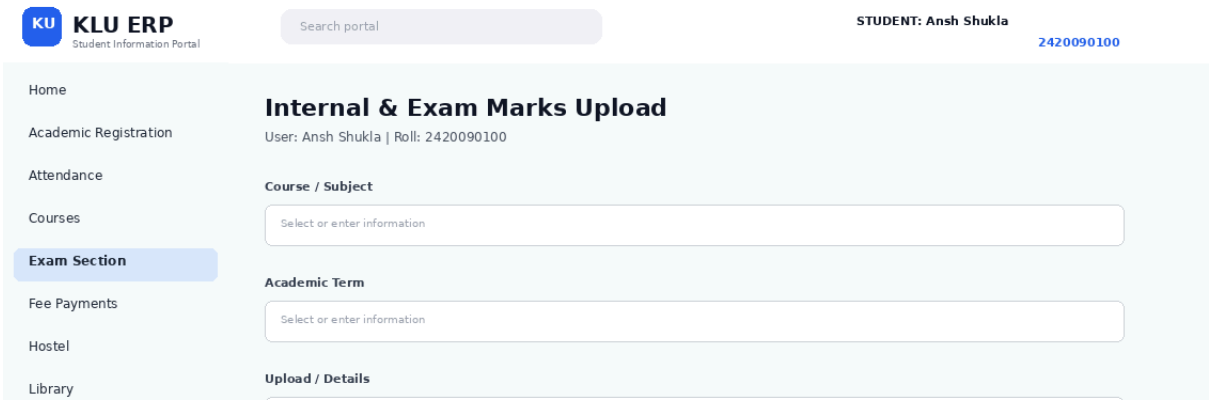

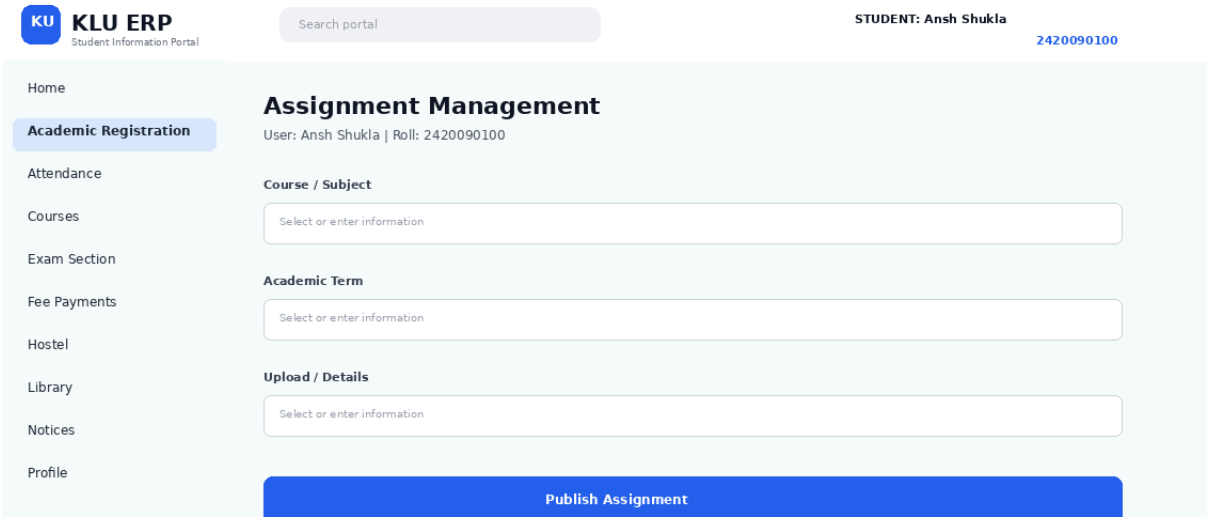

---

7. Expected Outcomes

- Secure ERP System
- Easy access to academic information
- Accurate attendance management
- Reliable examination results
- Secure online fee payment
- Improved communication between students and faculty

- Better management of university activities
- Scalable system for future improvements

Conclusion

The KL University ERP System helps students, faculty, and administrators manage university activities in one place. It provides secure access to academic information, reduces manual work, and improves communication. Using the Agile Software Development Model makes it easier to add new features, fix bugs, and improve the system based on user feedback.
